

05/12/2006

Dear Sir or Madam,

What do you and **schloms + partner** have in common?

- We all want to live from, with and for particle foams !!!

Today we would like to present to you a new company in the EPS, EPP and EPE particle foam sector, although some of you have already been informed by an announcement made by Teubert Maschinenbau.

Due to the many inquiries made over the last few years concerning the need for an independent and expert team in this particular sector of the plastics business, we have decided to fill this gap. We aim to offer you a holistic consulting and realization approach, dealing with both theoretical and practical aspects. With respect to our professional backgrounds we can assure you that this approach is based on confirmed technical and commercial know-how.

**"Realizing potentials"** stands for a thorough analysis of your company's potential and a basis for a joint realization to improve your competitive position in the market.

We can offer you expert know-how for single short-term tasks like plant layout, tooling design, process trials, the training of new staff or, indeed, the handling of complete projects.

We also have some interesting contracting models on our website and we would be glad if you could take the time to visit us at

**[www.schloms-partner.de](http://www.schloms-partner.de)** - or give us a call on - **Phone +49 (0) 7702 / 419 344.**

We will be happy to speak to you personally.

With best regards,

schloms + partner

Christine Müller

Georg Schloms
